ABSTRACT:

Peptide-copper complexes are disclosed which stimulate the growth of hair on warm-blooded animals. In one aspect of this invention, the peptide-copper complexes are dipeptides or tripeptides chelated to copper at a molar ratio ranging from about 1:1 to 3:1, with the second position of the peptide from the amino terminus being histidine, arginine or a derivative thereof. The peptide-copper complexes may be formulated for administration by, for example, topical application or injection. Any affliction associate with hair loss, including hair loss associated with both androgenetic and secondary alopecia, may be treated with the peptide-copper complexes of this invention.

ABSTRACT:

Personal treatment compositions including cleansing and/or cosmetic compositions are disclosed, the cleansing compositions, for example, comprising from about 0.001% to about 10%, preferably from about 0.005% to about 6%, enduring perfume comprising at least about 70% of enduring perfume ingredients; from about 0.01% to about 95% surfactant system; and the balance carrier. The enduring perfume provides a lasting olfactory sensation thus minimizing the need to use large amounts. Preferred compositions are liquid and comprise water as a carrier.

514/845, 514/846, 514/944

ABSTRACT:

Personal treatment compositions including leave-on hair care compositions and leave-on skin care compositions, comprising from about 0.001% to about 50%, preferably from about 0.005% to about 6%, enduring perfume, are disclosed. The enduring perfume provides a lasting olfactory sensation thus minimizing the need to use large amounts.

US-CL-CURRENT: 424/195.1; 435/325, 435/357, 435/371, 435/390, 435/404, 514/23,
514/474, 514/844, 548/535, 562/562

ABSTRACT:

The present invention relates to a method and composition for topically administering a Smelophyllum capense extract as a cosmetic, dermatologic, or pharmaceutical composition to promote collagen synthesis. Administration of the composition results in the firming of the skin, improves healing and is suitable for treating various pathologies accompanied with a deficiency in collagen. The extract can also be added to cell culture medium used in the culture of skin cells, particularly skin fibroblasts. The composition can contain between 0.0001% and 1% by weight of the Smelophyllum capense extract, and the extract can be obtained by extraction with a polar solvent. The composition can contain other ingredients including ascorbic acid, madecassic acid, asiatic acid, madecassoside, asiaticoside, alpha-1-protease inhibitor, collagenase inhibitors, elastase inhibitors, lysine, proline, 2-oxoglutarate and ginsenoside Ro.
